

Systems Audit

We offer a comprehensive onsite audit of your IT infrastructure; including hardware, software, systems, and processes. We interview your staff, review your applications, inventory your hardware and analyze your IT budget. This audit will result in a pro-active set of recommendations for improving the technology infrastructure, processes, data, and systems.

These recommendations for improvement generally result in any combination of the following: increased efficiency, greater security, better disaster preparedness, fewer service outages, better trained and equipped associates, increased productivity and, most importantly, peace of mind.

The cost of the comprehensive systems audit and review is \$50 per system. Additionally, if you'd like us to implement any of the recommendations from the audit, the labor cost will be discounted 20%.
